

Global Network Architecture – Technical Working Group

Participation Guidelines - v1.1 – June 2017

The Global Network Architecture – Technical Working Group welcomes participation from network architects and engineers from R&E networks around the world. We hold 2-3 face-to-face meetings each year, usually in conjunction with other meetings and usually alternating between a US and non-US location.

The GNA Technical WG work between the face-to-face meetings takes place in an occasional video conference and on the mailing list. Versions of working documents are stored in a folder on Box.com.

We have a minimal set of expectations for participants. Meeting these simple expectations will allow for the most beneficial and productive meetings

1. You make every attempt to attend the meetings. This will require financial support from your organization, as the GNA Technical WG has no funds for this purpose.
2. Prior to the meeting, you should have read all the documents relevant to the meeting. An agenda will be published prior to the meeting.
3. At the meeting, you participate actively and respectfully in the items being discussed.
4. When volunteers are called on a topic of interest to you, you offer to assist.

For additional information about the GNA Technical WG please visit our web site at: <http://gna-re.net/>

Or contact the co-chairs (addresses below) to join the mailing list:
